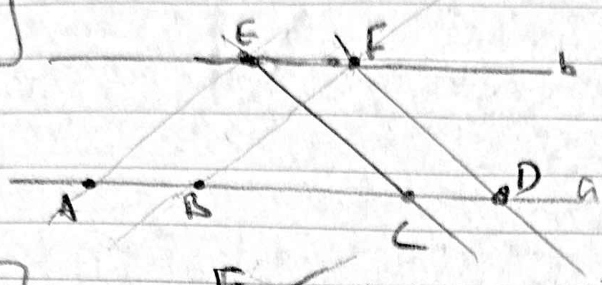
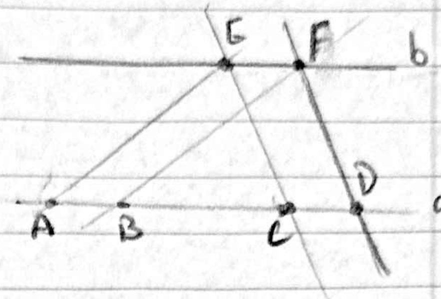
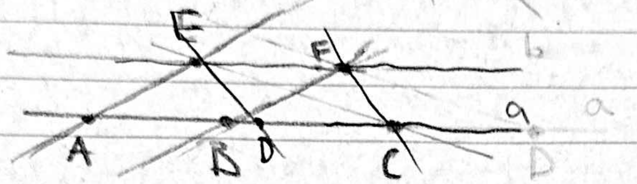
Homework #4

1:





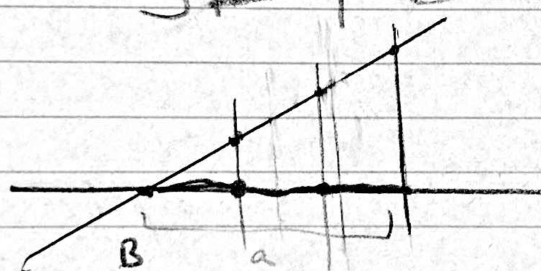
2:



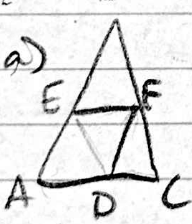
3: a) by drawing 2 lines from the ends of both lines, if the lines are parallell then its equal

b) using ~~pattern~~ prove from problem 2

4



7 a)



$\Rightarrow$

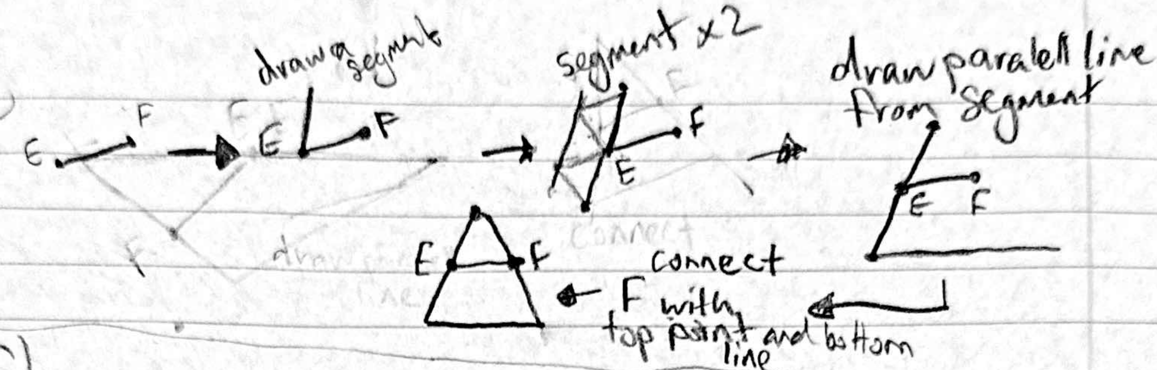
AE = BF	FD = AE	FD = BE
BF = CF	EF = AD	
CD = DA	EF = DC	

b) BF and FC

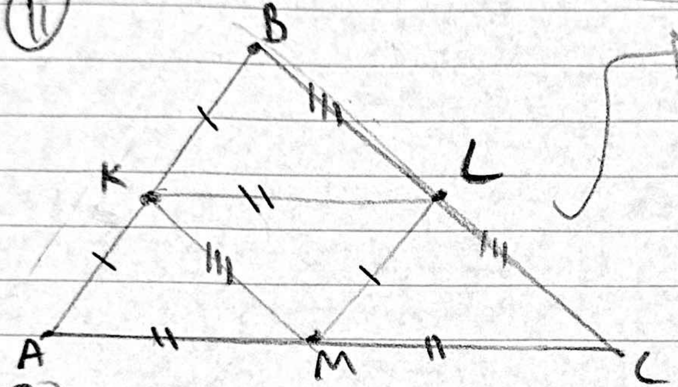
8 a) it lies on AC when E&F are the bimedians
b) it is in ΔABC when E & F are above bimedian
c) outside ΔABC when E & F are below bimedian

9 a) when G is above of the bimedian
b) When G is bellow the bimedian
c) When G is the bimedian

(10)

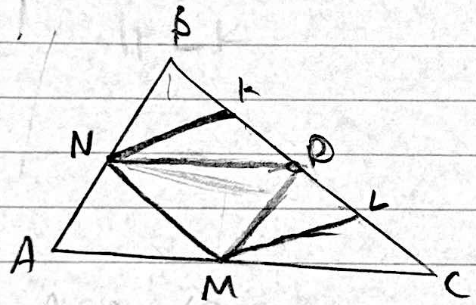


(11)

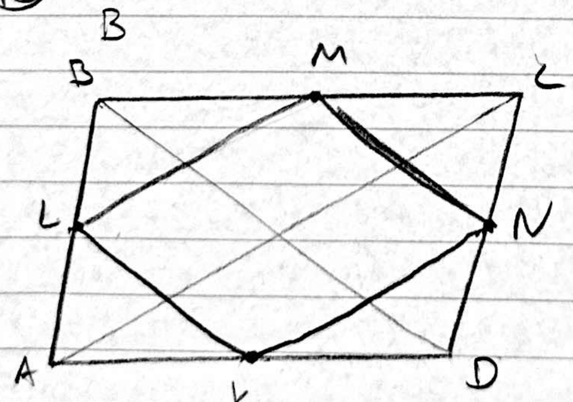


So each △ has sides I, II, and III

(12)



(13)



You can see that by cutting ABCD you get M, N, L, and K as the Bimedians of the triangles
